

Simply the best way to prepare indexes

CINDEX™ 2.0 for Mac

Principal New Features

CINDEX 2.0 for Mac offers a broad range of new features and substantially enhanced performance.

User Experience and Productivity

- Cindex is much faster, and provides greater flexibility in working with indexes. You can more easily move around in the main view of the index.
- There are major new editing capabilities, including an exceptional ‘smart’ flip, and better checks for well-formed entries.
- When *See* cross-references refer to fewer than a specified minimum number of target entries, Cindex can automatically convert them to fully-qualified entries.

Managing Indexes

- Cindex routinely checks the integrity of indexes, and can repair records if they are ever damaged.
- A new revert-to-saved command restores the index to its last-saved state—useful if you have made some major changes to the index that you then decide to discard.

Build Multi-Purpose Indexes

- An index record can now contain a special field for holding a comment or a web address, etc.
- You can use multiple labels to control the visibility of different kinds of index records.

Searching and Spelling

- You can *exclude* from searches records that have specified attributes.
- Spelling check is improved, with better management of user dictionaries.

Formatting Entries

- Headings and subheadings can be preceded by optional prefix text. You can override the standard index style on an entry-by-entry basis.
- There are new options for placing cross-references and for punctuating them automatically.

Sorting Entries

- New capabilities include better handling of text in parentheses, preset options for *Chicago Manual of Style* or ISO 999 alphabetizing, and more refined sorting of locators.

Exporting Documents

- Cindex can now export a fully formatted index as tagged text for Adobe InDesign.
- When you embed entries in other documents you can now control whether sorting information is also embedded.
- When exporting documents in database format, you can specify number of fields.

Help

- There is new and richer on-line help.
- Cindex can notify you automatically when an update is available.

System Requirements

Cindex 2.0 requires Mac OS 10.4 or higher.
